Using MySQL Workbench

1. Check the [MySQL Workbench Help Pages](#).

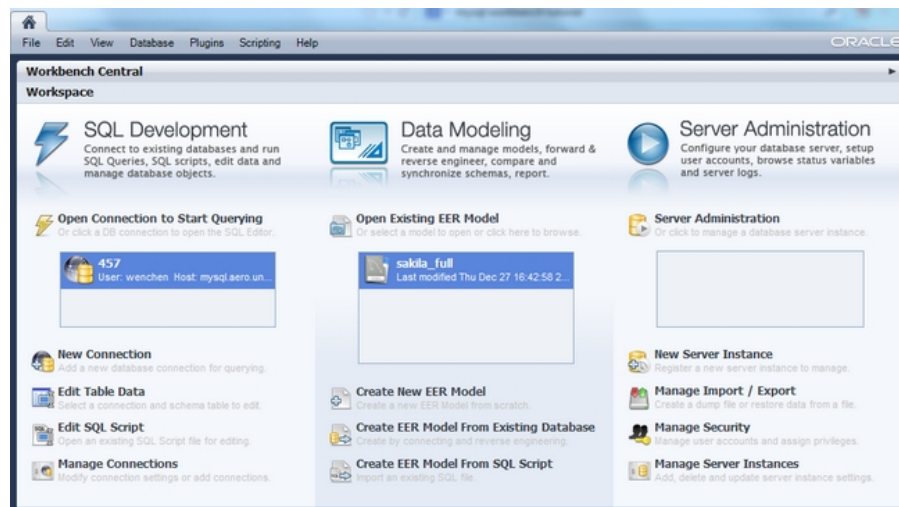

2. Download and install the [MySQL Workbench](#).

Note that the current version (6.3.8) does not work for the instructor, so an old version [MySQL Workbench 5.2.44](#) is used with the following connection parameters:

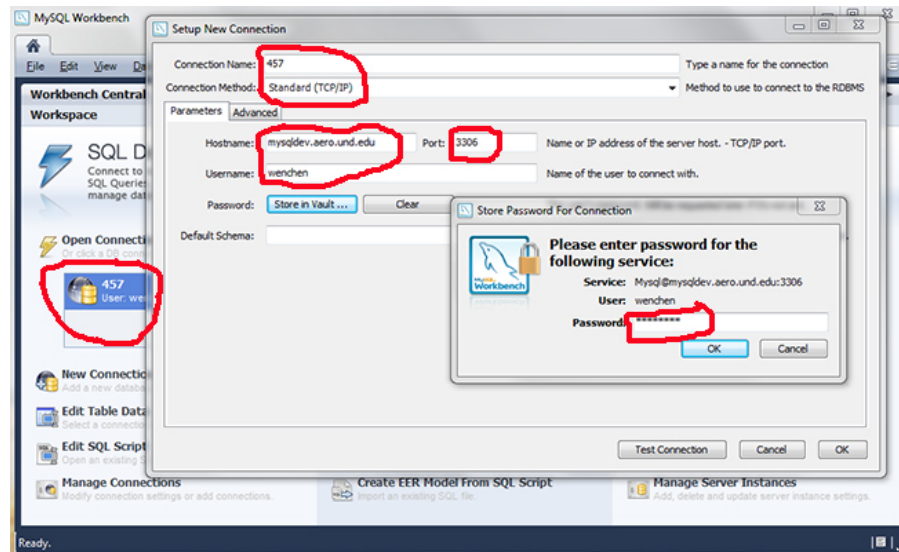

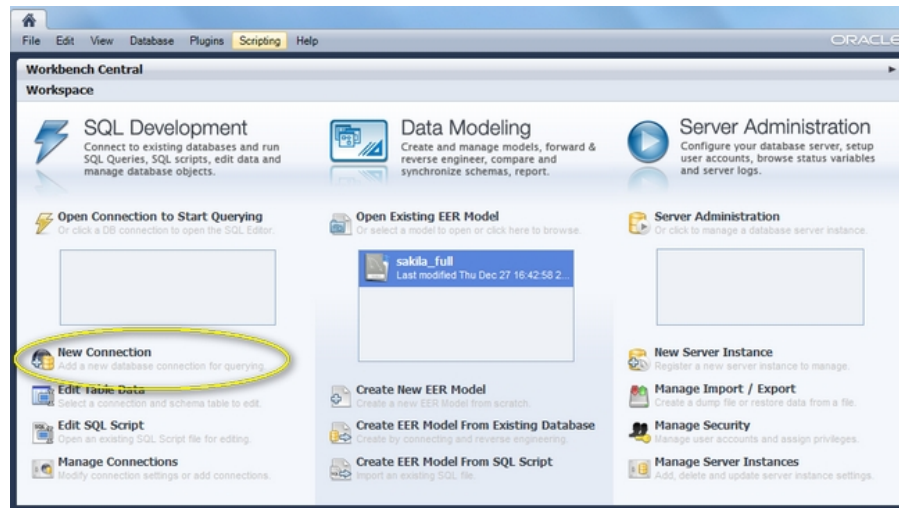

- o Connection Method: Standard (TCP/IP),
- o Hostname: mysqldev.aero.und.edu,
- o Port: 3306, and
- o Username: your MySQL account ID.

3. Activate the MySQL Workbench such as

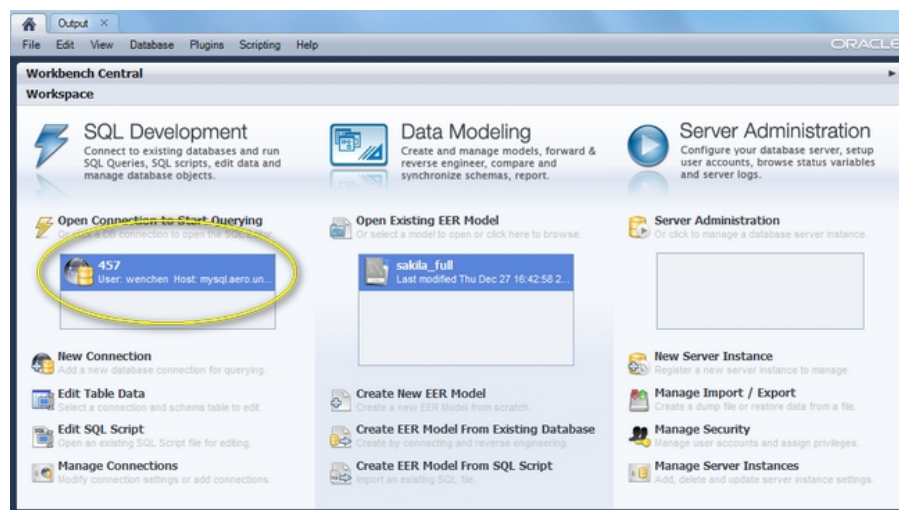

Windows Start button ⇒ All Programs ⇒ MySQL ⇒ MySQL Workbench

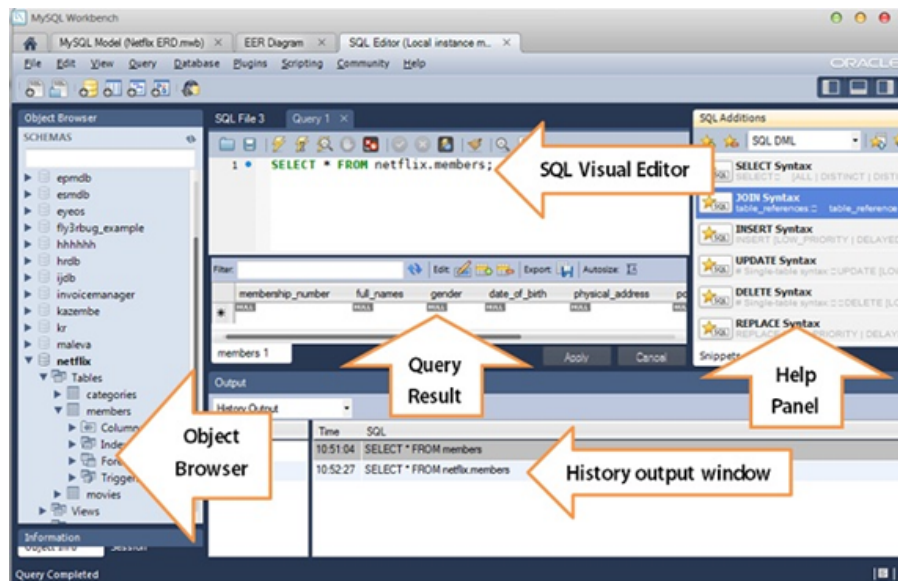

4. For the first-time use, create a new connection such as “457” by clicking the “New Connection” in the left pane.

5. Click a DB connection to open the SQL Editor.

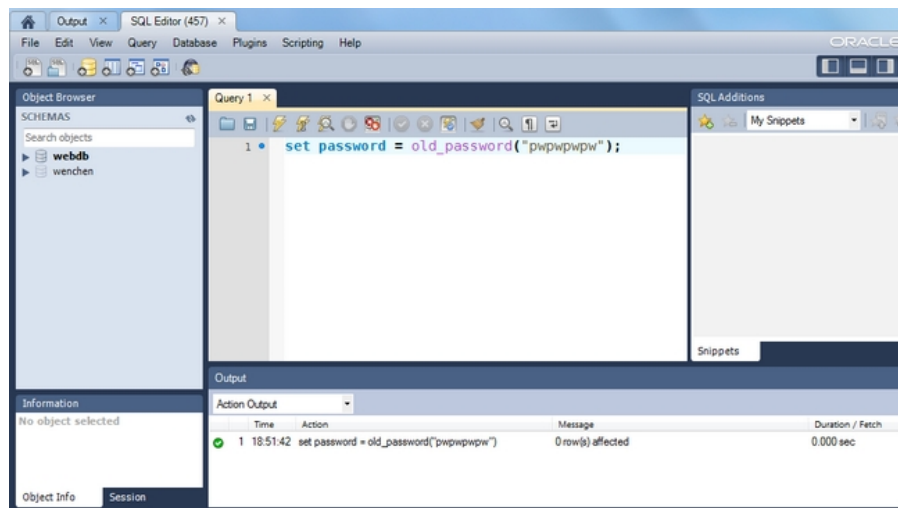

The following image shows some Workbench sections.

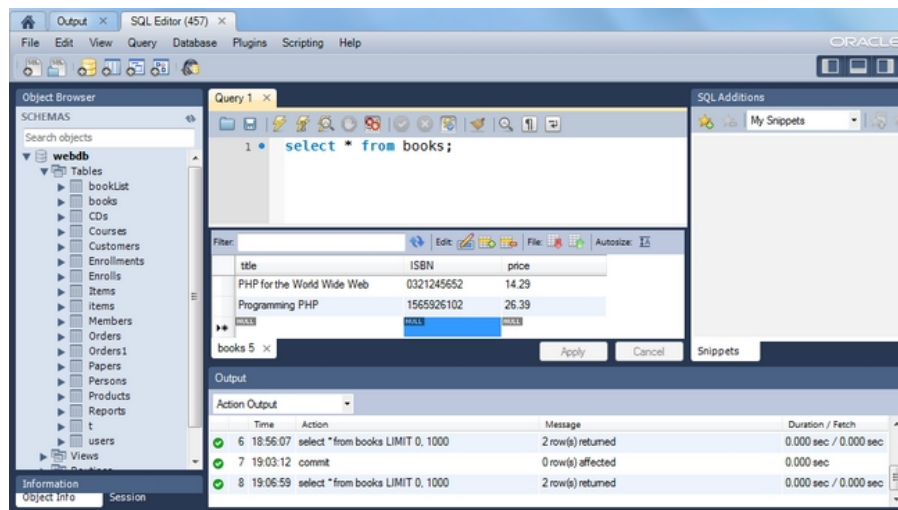

6. For the first-time use, change the password by using the following command:

```
mysql> set password = old_password("pwpwpwpw");
```

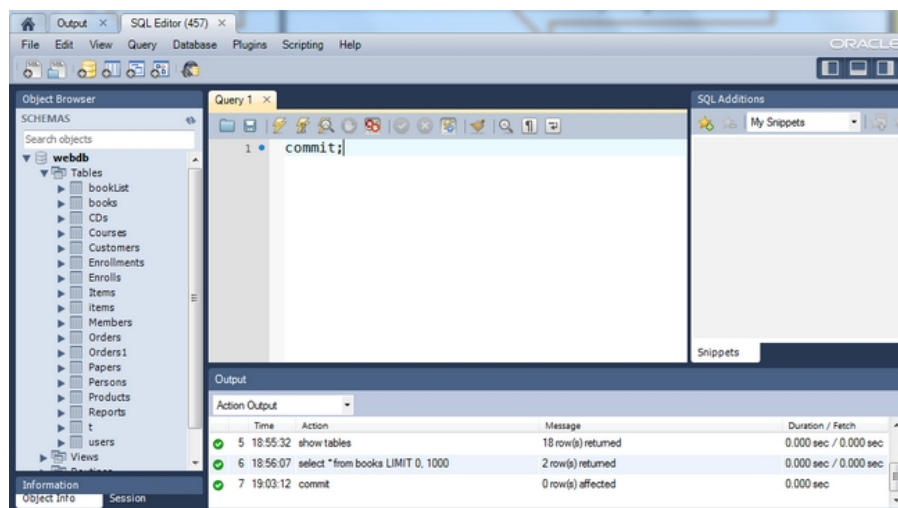

where pwpwpwpw is whatever new password you want.

7. Start entering SQL commands and execute them.

8. Commit the database if it is updated.
