An Android Hello-World Project

This application is based on the following three sources:

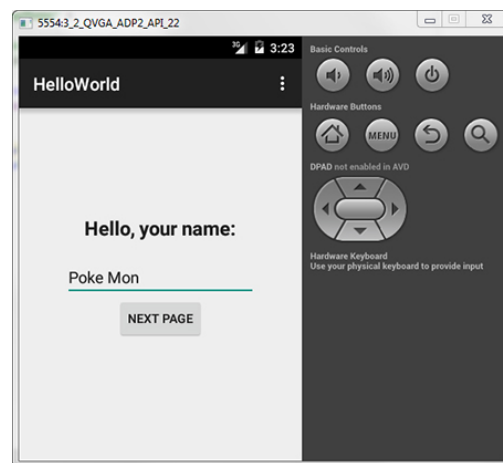

- A simple “MyApplication” program is the default template when you create an Android project.
- The “[Hello, World](#)” example is from the [Getting Started](#) of the [Android Developers](#) site.
- [Getting Started with Android Studio](#) and [Google Android Lessons](#).

Two activities/pages are included in this application:

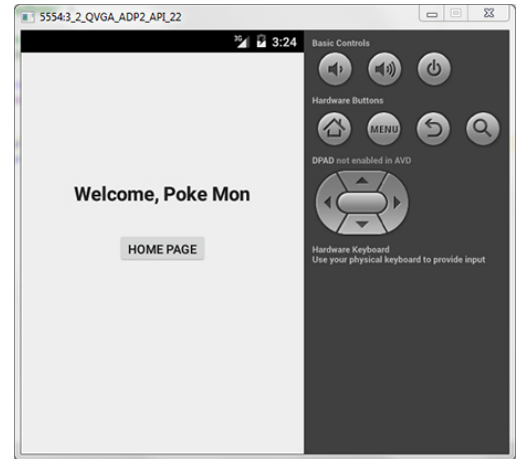

- [MainActivity.java](#), which is the startup page and
- [NextActivity.java](#), which is the other page.

Other than the two pages, the following five components of this app will be detailed too:

- Android manifest file ([AndroidManifest.xml](#)),
- Layout XML code ([activity_main.xml](#) and [activity_next.xml](#)),
- Strings ([strings.xml](#)), and
- Menu pages ([menu_main.xml](#) and [menu_next.xml](#)).
