Radio Buttons: Java Source Code

Line 08: [import android.widget.RadioButton;](#)

A radio button is a two-states button that can be either checked or unchecked.

Line 09: [import android.widget.RadioGroup;](#)

This class is used to create a multiple-exclusion scope for a set of radio buttons. Checking one radio button that belongs to a radio group unchecks any previously checked radio button within the same group.

Line 11: [import android.widget.Toast;](#)

A toast is a view containing a quick little message for the user. When the view is shown to the user, appears as a floating view over the application.

Line 31: [int selectedId = radioSexGroup.getCheckedRadioButtonId\(\);](#)

Return the identifier of the selected radio button in this group.

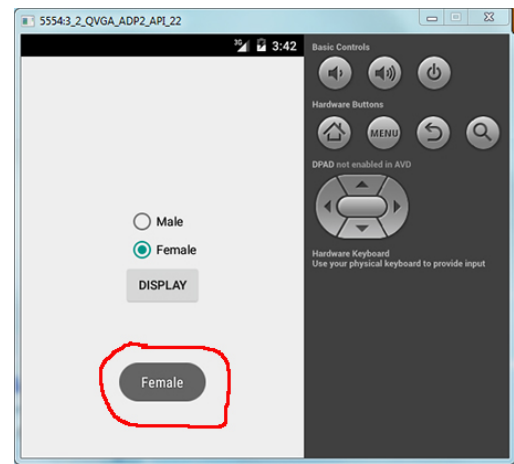

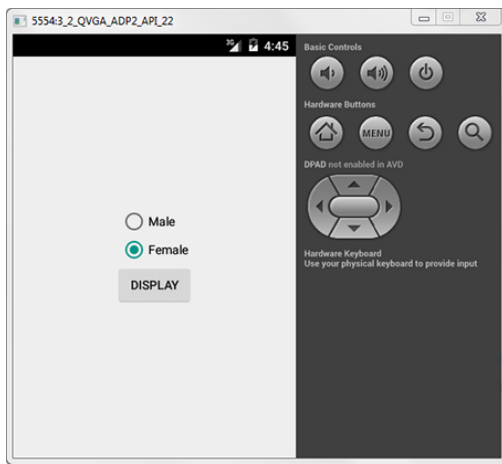

Line 34: [Toast.makeText\(MainActivity.this,](#)

Line 35: [radioSexButton.getText\(\), Toast.LENGTH_LONG](#)
[\).show\(\);](#)

Make a standard toast that just contains a text view with the text from a resource.
